

Postdoc Offer

Subject: Looking for analytical/computer chemist

Dear friends,

for supporting us in final evaluation of SOLUTIONS monitoring data as well as for the further advancement of our workflows we are presently looking for a Postdoc for one year. Environmental, analytical and computational chemists are preferred. Affinity to computer work is required, experience in LC-MS very much appreciated. We are offering interesting work in a nice group, a year of work experience abroad, insight into and contribution to automated workflows in target and non-target screening, the opportunity to write and contribute to nice publications and (if that's of interest) support in proposal writing for extension. Would be great if you could spread this little advertisement among your co-workers and partners at and beyond CSIC. The anticipated start would be December 2018 or January 2019. The working place would be Leipzig.

Thanks a lot and best regards

Werner
